Runestones Devs' Gems Hunt

—

Communication Plan

1. Instagram – Visual and community-based communication

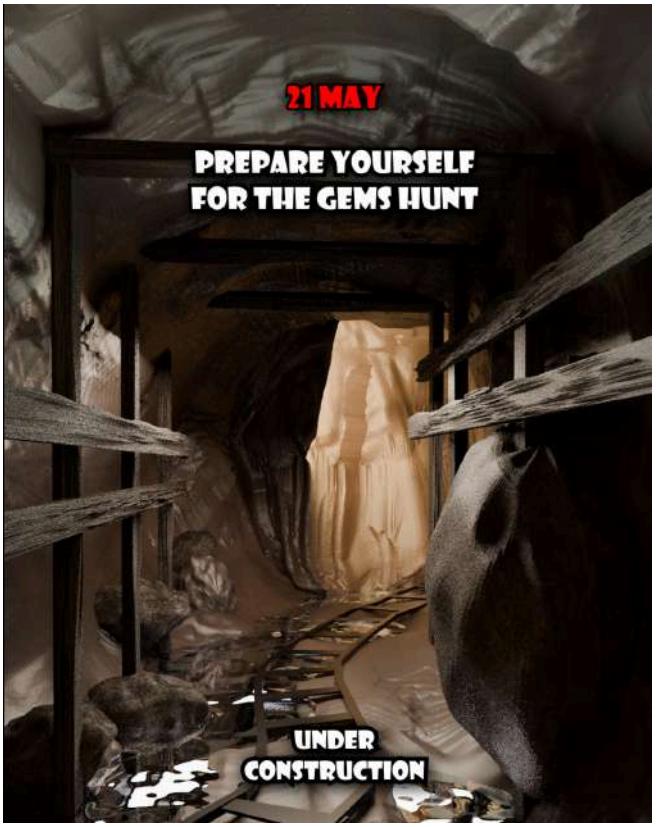

Target audience: casual and regular gamers, young adults, students, indie game fans.

Instagram was our main platform to share updates and build a connection with our future players.

- Post "Under Construction" (March 31)

Goal: create anticipation

This was the first public announcement of the game. The post included a teaser message: "Prepare yourself for the gems hunt", along with the official release date. We kept the details about the game vague to generate curiosity and encourage people to follow the project.

- Post “Test Session” (May 1)

Goal: invite participation

This post invited people to join an open test session of the alpha version of the game. It helped us get feedback from players and involved the community in the development process.

- Reel “Official Release” (May 9)

Goal: showcase the final result

This short video officially announced the game’s release and showed the final visuals of the gems. The reel format allowed us to present the game in a more dynamic and engaging way.

- Regular Stories

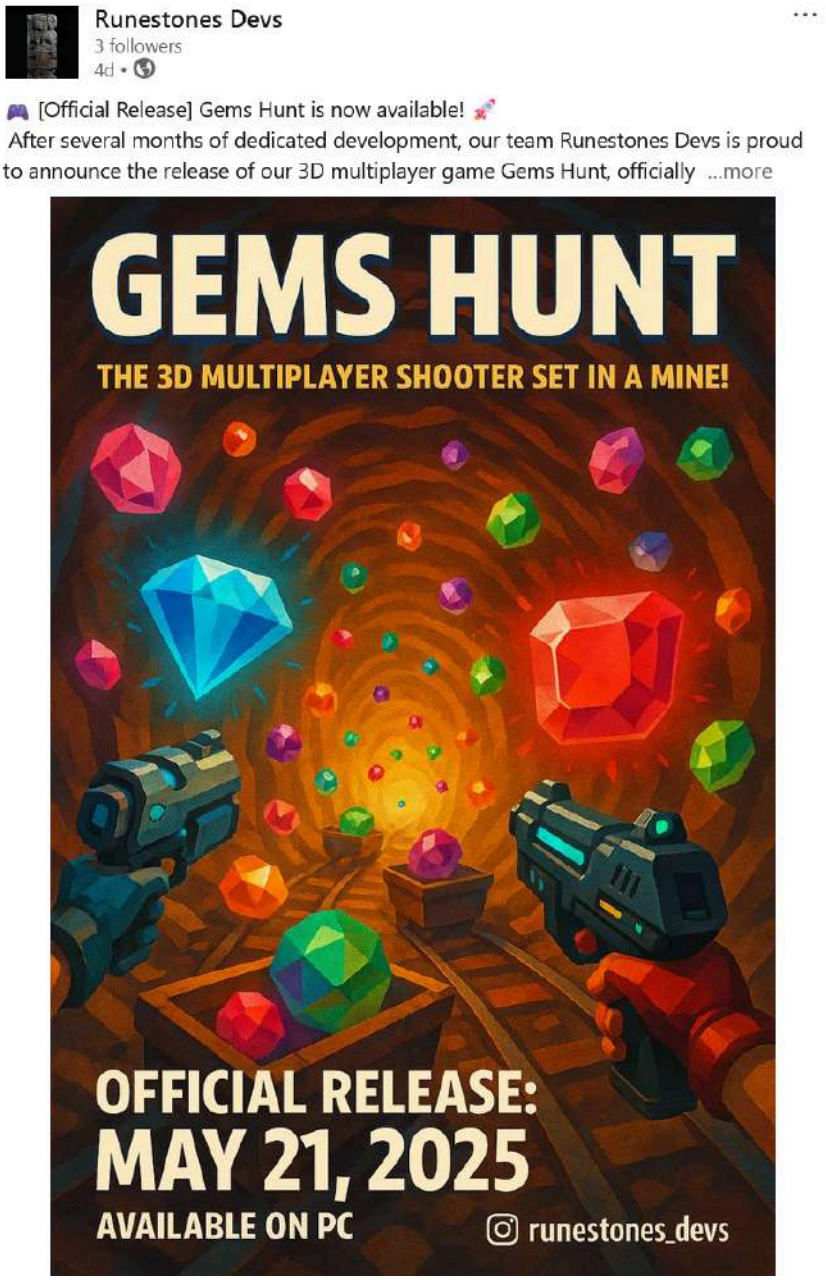

Goal: keep the audience updated
During the weeks before the release, we shared several stories to:
• remind about the test session
• show gameplay previews and development progress
• reveal the first official poster
Stories helped us stay visible and interact regularly with our followers.

2. LinkedIn – Professional and educational communication

Target audience: teachers, game industry professionals, recruiters, and other students.

We published a LinkedIn post with our second official poster. The text explained the concept of Gems Hunt, the development process and
the academic context of the project

We wanted to share our experience in a more professional way and highlight our work to people interested in student projects or game development.
